

DO YOU KNOW WHY WELL TANKS SWEAT?

The condensation that forms on the outside of a tank is moisture from the warmer basement air. When that basement air comes into contact with the chilled tank, the air loses its capacity to hold water vapor, and water droplets form on the tank's cold surface.

High moisture levels in your basement are not just a nuisance, they cause severe health issues, property damage & high utility bills.

Basements are inherently damp!
"An ounce of prevention is worth a pound of cure"

WHY TANK SWEATER?

WITH OVER 50 YEARS COMBINED EXPERIENCE

in the water well industry, Tank Sweater founders Chuck Huebner and Trisha Vukodinovich were very familiar with tank condensation and the frustration it caused homeowners. Working with a skilled local sewing contractor, they developed the tailored, insulated Tank Sweater to serve as a barrier between the basement air and the tank. Without the contact, there's no temperature change and unwanted condensation does not occur.

As it turns out, curtailing tank condensation has benefits beyond the elimination of unwanted moisture. With Tank Sweater you can minimize mold and mildew and health issues associated with these culprits while also reducing tank corrosion, utility bills, and basement odors.

DO YOUR WELL TANKS LOOK LIKE THIS?

THE TANK SWEATER

AVAILABLE IN TWO SIZES!

While we can't solve all your moisture problems, we can certainly eliminate a major contributor! SWEATY TANKS!!

203

29.5 Tall x 18.15" diameter
Fits tank sizes from
30"-52" Tall x
14" x 18" Diameter

250

20" Tall x 24.50" diameter
Fits tank sizes from
20"-29" Tall x
19"-24" Diameter

THE TANK SWEATER PROVIDES

- LESS: Tank Corrosion
- LESS: Mold & Mildew
- LESS: Electric/Utilities
- LESS: Pests
- LESS: Less Odors
- LESS: Damage to carpet, drywall, furniture and household goods

MOST IMPORTANT!

- LESS: Health Issues
- LESS: Allergies
- LESS: Headaches
- LESS: Pests
- LESS: Less Odors
